

[illegible]

e.g. if you saw 5 red lotteries with a 50% chance of winning but only 1 blue lottery with a 50%; chance put the number 5 in the box under "50%" and to the right of "Red" & the number 1 under "50%" and to the right of "Blue".

Color	0%	10%	20%	30%	40%	50%	60%	70%	80%	90%	100%
Red											
Green											
Blue											

On a scale of 1-10 how often do you think you accepted lotteries with the given chances of winning?

[illegible]

In part 2 you will have one more lottery that you haven't seen before, Yellow. Use your gut to tell how often you think the Yellow lottery would have had the given chances of winning, if you had seen it in Part 1.

Color	0%	10%	20%	30%	40%	50%	60%	70%	80%	90%	100%
Yellow
